

Meet your new attendance takers

Minute-based Attendance Plugin for PowerSchool

State compliance for minute-based instructional time.

The identiMetrics Minute-based Attendance Plugin automates the attendance code input to each student's Daily Attendance Record with a single scan AND records the time automatically to the *Clock In/Clock Out* fields. This allows PowerSchool to provide a report on the exact number of instructional minutes for each student.

You set up your attendance code to automate either the *Clock In* time OR the *Clock Out* time.

- If the attendance code is set up to automate the *Clock In* time, then the student scans and the time is recorded to the *Clock In* time and the end of day is recorded in the *Clock Out* time.
- If the attendance code is set up to automate the *Clock Out* time, then the student scans and the time is recorded to the *Clock Out* time and the start of day

The identiMetrics Minute-based Attendance Plugin has all of the features of the Tardy Management Plugin and more. It even prints hall passes for any attendance code.

*"Easy to use. Simple to implement. Solves a BIG problem.
Price is a no brainer!!"*

Robert Woods, Associate Principal, Avon High School, Ohio

Options include
biometric finger
scanner and/or barcode
scanner.
